

“Reconstruction of Cabin Framework Production”

Necessary Financing for the Project – 200 mln. \$

Project provides modernization of pressing, assembling and welding and painting production due to the implementation of advanced equipment and technology:

- Double action hydraulic presses for stamping of facing panels and large parts of cabin frameworks significantly improve the accuracy of manufacturing and improve the design of the cabin;
- Robotic system for welding panels and frameworks of cabins ;
- Cathaphoretic priming cabin frames, providing a significant increase in corrosive resistance;
